Avocado Transportation Procedures

1. Pre-Loading Inspection:

- Before loading the avocados onto the truck, conduct a thorough visual inspection to ensure that the avocados meet the required quality standards.

2. Temperature Monitoring:

- The truck's refrigeration unit, commonly known as the 'Reefer Unit,' must be set to the precise temperature range required for avocado transportation. Use a reliable data logger to monitor and record temperature throughout the journey.

3. Security Seals:

- Secure the doors of the truck with tamper-evident security seals to prevent unauthorized access.

4. Driver Training:

- Ensure that the driver is trained to handle potential temperature-related issues and knows the procedure for notifying responsible personnel.

5. Emergency Protocol:

- In the event of temperature fluctuations or quality concerns upon arrival, follow these steps:
 - 1) Driver immediately contacts responsible personnel.
 - 2) An insurance expert is engaged to assess the situation.
 - 3) The truck is secured, and the avocados are unloaded under supervision.
 - 4) All relevant parties are informed in real-time to ensure a coordinated response.
